

Student Poster Session

2013 IEEE Power & Energy Society General Meeting

Vancouver, BC, Canada

July 21-25 2013

Poster Categories:

- | | |
|--|--|
| 1. System-wide events and analysis methods | 10. Integrating renewable energy into the grid |
| 2. Advanced computational methods for power system planning, operation and control | 11. Intelligent monitoring and outage management |
| 3. Asset management | 12. Market interactions in power systems |
| 4. Cyber and physical security of the smart grid | 13. Power electronics |
| 5. Dynamic performance and control of power systems | 14. Power system modeling and simulation |
| 6. Electric machine and drives | 15. Smart grid technology |
| 7. Emerging software needs for the restructured grid | 16. Smart sensors, communication and control in energy systems |
| 8. Flexible AC transmission systems | 17. Substation and distribution automation |
| 9. Geomagnetic disturbance on electric power systems | 18. Power Engineering Education |

Poster Number	Poster Title	Author
101	Harmonic impact of LED lamps and PV panels	Yang Wang
102	Trajectory Sensitivities: Applications in Power Systems and Estimation Accuracy Refinement	Lei Tang
103	A Novel Approach for Ringdown Detection Using Extended Kalman Filter	Mehrdad Yazdani
104	Optimal PMU Placement for Two Level Linear State Estimation	Ming Meng
105	Voltage Instability Protection in Power Systems	Nataliia Petryshyn
201	Dynamic reserve zones for distinct scenarios	Joshua Lyon
202	Study of Artificial Neural Network Based Short Term Load Forecasting	Ashton Webberley
203	Hour-ahead Corrective Topology Control for Intermittent Renewables and N-1 Contingencies	Mojdeh Abdi Khorsand
204	Robust Corrective Topology Control	Akshay Korad
205	A Parallelizable Greedy Algorithm for Transmission Switching	Mostafa Sahraei-Ardakani
206	Multi Area State Estimation using Area Slack Bus Angle Adjustment with Minimal Data Exchange	Ankush Sharma
207	A Two-Level Parallel Decomposition Approach for Transient Stability Constrained Optimal Power Flow	Guangchao Geng
208	A Quadratic Robust Optimization Model for Automatic Voltage Control on Wind Farm Side	Tao Ding
209	Security constrained unit commitment with demand response	Guodong Liu
210	Dynamic Programming Solution to Distributed Storage Operation and Design	Junjie Qin
211	A Software Performance Engineering Approach to Fast Transmission Probabilistic Load Flow Analysis	Tao Cui
212	Optimal blackstart capability for power system restoration	Yazhou Jiang
213	Transformation of Measurements for Using External Network Equivalents in State Estimation	Mahesh Vardikar
214	Synchrophasor State Estimation for Data Quality Improvement on the New York Transmission System	Scott Ghiocel
215	A Hybrid Maintenance Scheduling Model for Thermal Generators	Jasper Quach
216	Transmission Expansion Planning Considering Uncertainty in Demand	Luis Fernando Fuerte
217	Second-Order Cone Relaxations for the Alternating Current Optimal Power Flow problem	Chen Chen
218	Short-Term Wind Power Prediction Using a Wavelet Support Vector Machine	Jianwu Zeng
301	Equivalent Indices for Shunt Power Capacitor Loading assessment	Yu Tian
302	Study of Transformer Winding Deformation by Frequency Response Analysis	Mohd Fairouz Mohd Yousof
303	Analysis of Grid Impacts of an Electric Vehicle DC Quick Charger	Nicole Zimmerman
304	Reconciling Consumer Behaviors with Demand Response in the Smart Home	Adam Zipperer
305	Security-Based Circuit Breaker Maintenance Management	Payman Dehghanian
306	Optimal Transformer Sizing with the Presence of Probabilistic Electric Vehicle Charging	Sachin Argade
401	Real-Time Price-Based Demand Response Management for	Zhi Chen

	Residential Appliances Considering Privacy Protection	
402	Mitigation Measures against Cyber Intrusions at the Substations	Hong Junho
403	Power Grid Interdiction with Alternating Current Optimal Power Flow	Wei Yuan
404	A Real Time Cyber-Physical Test Bed	Ceeman Vellaithurai
405	Security Aspects in Computation of Smart Grid Systems	Ankur Majumdar
406	Attack-Resilient Measurement Design to Mitigate Topology Based Cyber Attacks in State Estimation	Aditya Ashok
407	Coordinated Attacks Detection using Cyber Physical Alert Correlation	Siddharth Sridhar
501	Oscillation Modal Analysis from Ambient Synchrophasor Data using Distributed Frequency Domain Optimization	Jiawei Ning
502	Set Point Adjustment Strategy for Mitigating Transients in a Microgrid	Christopher Stone
503	Integration of Demand Response into Load Shedding in Distribution Network	Kaiumuzzaman Mollah
504	Adaptive PI Control of STATCOM for Voltage Regulation	Yao Xu
505	Control of UPFC Using Hamilton_Jacobi_Bellman Formulation Based Neural Network	Hamidreza Nazaripouya
506	Data Analysis and Visualization of Oscillation Monitoring System in Power Systems	Tianying Wu
507	Reactive Power Substitution Between Rapid and Slow Dynamic Var Compensators	Xuran Wang
508	Role of Electromechanical Wave Propagation in Power Systems	Tianya Li
509	Making On-line Transient Stability Decisions with Multi-level Decision Trees	Tuo Ji
510	Some issues with Quasi-Steady State Model in Long-term Stability	Xiaozhe Wang
511	Statistical Detection and Time-Localization of Forced Oscillations in Power Systems	Jim Follum
512	New Grid-tied Power Converter for Battery Energy Storage	Ahreyon Park
513	Power and Energy Capacity Requirements of Storages Providing Frequency Control Reserves	Theodor Borsche
514	Reduction of Harmonic Distortion in Off-Grid Energy Systems	Zach Ulibarri
515	Two-Level Control of Doubly Fed Induction Generator using Flatness-Based Approach	Variani Hassani
516	Load Factor Control Using Community Energy Storage and Neural Network Predictive Load Modeling	Ben Ollis
601	Evaluating FIDVR using an air conditioner stall model with real time digital simulator	Kumaraguru Prabakar
602	Current-Based Fault Detection for Wind Turbine Systems via Hilbert-Huang Transform	Dingguo Lu
701	A Statistical Approach to End - User Energy Consumption	Jonas Traph_ner
702	Modeling and Analysis of Campus Microgrid Distribution System	Sayansom Chanda
703	Multi-Agent-Based Information Collection Algorithm for Isolated Power Systems	Guanqun Wang
801	Increased Security Rating of Overhead Transmission Circuits Using Compact Phase Design and High Phase Order	Brian Pierre

802	DC Impedance-Model-Based Resonance Analysis of a VSC-HVDC System	Ling Xu
901	Review of Earth Conductivity Structure Modelling For Calculating Geo-electric Fields	Dong Boyd
1001	Output Power and Harmonic Currents Analysis of Photovoltaic Systems in Net-Zero-Energy Houses	Hesam Yazdanpanahi
1002	Optimized Design of Battery Storage with High Penetration Distributed PV Units to Solve the Overvoltage Issue	Ye Yang
1003	Increasing Wind Capacity Value in Tasmania Using Wind and Hydro Power Coordination	Mehdi Mosadeghy
1004	Dynamic Reserve Zones for Day-Ahead Unit Commitment with Renewable Resources	Fengyu Wang
1005	Economic Assessment of Bulk Energy Storage in Transmission Systems with High Penetration of Renewable Generation	Nan Li
1006	Inertial response capability of DFIG according to wind speed	Stefanie Kuenzel
1007	Reliability and Economic Study of Multi-terminal HVDC with LCC & VSC Converter for Connecting Remote Renewable Generators to the Grid	Kazi Nazmul Hasan
1008	Effects of HVDC Connection for Offshore Wind Turbines on AC Grid Protection	Lina He
1009	Optimal Storage Placement and Size Considering the Uncertainty of Wind Power Using PSO and Sensitivity Analysis	Shuli Wen
1010	Reactive Power Planning Considering High Penetration Wind Energy	Xin Fang
1011	Capacitor and Generator Output Adjustment by Using PSO Considering N-1 Contingency for Large Penetration of Photovoltaic Power	Sho Ando
1012	Load-Frequency Control (LFC) Model Including Renewable Power and Demand Response	Colin Young
1013	Impact of Available Electric Vehicle Battery Power Capacity on Power System Reliability	Bei Zhang
1014	A Generalized Data Preprocessing Method For Wind Power Prediction	Jiakun An
1015	Robustness Analysis on Electric Vehicle Energy Distribution Networks	Guangyu Lin
1016	Optimal operation of Distribution Feeder considering PV generation reactive power support	Yashodhan Agalgaonkar
1017	Dynamic Models of Wind Turbine Generators In Power System Toolbox	Felipe Wilches-Bernal
1018	A Decentralized Coordinated Controller for Load Sharing in a Microgrid with Renewable Generation	Md Abdul Barik
1019	Mitigating the Detrimental Impact of Solar PV Penetration on the Voltage Profile of Power Systems	Nitin Prakash
1020	Coordinated Control for Grid Integration of PV Array, Battery Storage and Supercapacitor	Huiying Zheng
1021	Modeling of an All-Vanadium Redox Flow Battery and Optimization of Flow Rates	Binyu Xiong
1022	Probabilistic Power Flow for Distribution Networks with Photovoltaic Generators	Ren Zhouyang
1023	Regulatory incentive for distribution system operators to integrate distributed generation: Portuguese case.	Angela Picciariello

1024	Ground Fault Location in Ungrounded Large Scale PV Generators	Shea Pederson
1025	Application of sequential decision theory on integrating distributed energy resources	Yalin Huang
1026	Analysis of the Impact of Distributed Generation Placement on Voltage Profile in Distribution Systems	Po-Chen Chen
1027	Short circuit Analysis for integration of 10MW Windfarm in Nigeria at the PCC	Sunday Adio Owolabi
1028	Wavelet-Adaptive ANN Forecaster for Renewable Energy Sources for Continuous Supply in Microgrid Applications	Ahmed Elsayed
1029	Financial Transmission Rights Perform Well in Power Markets with High Penetration of Wind Energy?	Yang Yu
1030	Evaluating Possibility of Reactive Power Counteraction among Voltage Regulators in a PV Solar Farm	Afshin Samadi
1031	An Affine Arithmetic Approach for Microgrid Dispatch with Variable Renewables	Mehrdad Pirnia
1032	The Effect of Plug-In Hybrid Electric Vehicle Penetration on an Electric Microgrid	Andrew Clarke
1033	Multi-objective Network Reconfiguration of Distributions Systems with Renewable Energy	Huihua Yu
1034	Real Time Modeling and Simulation of CERTS Microgrid	Fransiska Martina
1035	Trading Wind Power in a Competitive Electricity Market Using Stochastic Programming and Game Theory	Ting Dai
1036	Optimal Wind Power Penetration in the Real-Time Energy Market Operation	Jairo Cervantes
1037	Effectiveness of Traditional Mitigation Strategies for Neutral Current and Voltage Problems under High Penetration of Rooftop PV	Alam Md Jan E
1038	Optimal Operations of Energy Storage System for Renewable Energy Plant	Shu Zhen
1101	An Efficient Outage Planning Method for Electrical Power Facilities Using Two-layered Tabu Search	Aya Fujiwara
1102	Travelling Wave Based Fault Location Using Dominant Fault Induced Surges in Circuit	Guangbin Zhang
1103	Hedging against system protection malfunction	Jose Luis Calvo
1104	Transformer Condition Assessment	Kyle Wiedeman
1105	The effect of instrument transformer accuracy class on the WLS state estimator accuracy	Markos Asprou
1106	Identifying Protective Device Operations in Distribution and Transmission Systems	Min Lwin
1107	Outage Detection in Power Distribution Networks with Optimally-Deployed Power Flow Sensors	Raffi Sevlian
1201	Investment Strategies Assessment Under Uncertainty	Yanyi He
1202	Improving Convergence of Horizontally Decomposed Stochastic Day-Ahead Unit Commitment	Garret LaBove
1203	Horizontal Decomposition-based Stochastic Day-ahead Reliability Unit Commitment	Yingzhong Gu
1204	Real Time Reactive Power Spot Markets	David Ganger
1205	Bidding Strategy for Wind Generation Considering Conventional Generation and Transmission Constraints	Hao Huang
1206	Smart Location Targeting for Power Flow Control Devices via	Omar Urquidez

	Shadow Price Weighting	
1207	Participation Model for Small Customers with Reliability Preference in Electricity Market	Zhongwei Zhang
1208	An Integrated Transmission and Distribution Systems Model with Distribution-based LMP (DLMP) Pricing	Nikita Singhal
1209	Hedging Decision of an Electricity Generating Firm with Market Power	Ekaterina Moiseeva
1210	Short-Term Electricity Price Forecasting	Erik Chalko
1211	Stability Analysis of an Energy Managed Smart Distribution System	Jesse Boyd
1212	Sensitivity Analysis of Real-Time Locational Marginal Price to SCADA Sensor Data Corruption	Dae-Hyun Choi
1301	Transformer less Intelligent Power Substation for 13.8 kV/480 V Grid Interface Applications	Sachin Madhusoodhanan
1302	Low Cross Regulation SIMO DC/DC Converter with Model Predictive Voltage Control	Wang Benfei
1303	On the Effects of Unbalances Harmonics and Interharmonics on PLL Systems	Luigi Feola
1304	Realizing Space Vector Modulation in MATLAB and PSCAD	Yan Ma
1305	Modeling soft-starter for wind generators in PSCAD	Jen-Pin Lin
1306	Adaptive SRF-PLL with Reconfigurable Controller for Microgrid in Grid-Connected and Stand-Alone Modes	Tarek Youssef
1307	Designing of a fuzzy controller based on Differential evolution tuning for VSC	Ivan Riano
1401	Parameter Identification of Doubly Fed Induction Generator (DFIG) Using Real-time Measurements	Shaotong Guo
1402	Managing Solar Uncertainty in Neighboring Systems with Stochastic Unit Commitment	Robin Broder Hytowitz
1403	Real Time Corrective Switching in Response to N-m Events	Pranavamoorthy Balasubramanian
1404	Modeling of Electrical Arc for Transient Simulation	Qingxin Shi
1405	Flexibility Assessment in Power Systems	Yury Dvorkin
1406	Factors Affecting Induced Voltage on Pipeline Located Close to High Voltage Transmission	Ahmed Alshahri
1407	Transient Stability Analysis Using Prony Analysis	Takuya Omi
1408	Supplementary Load Frequency Control with Storage Battery Operation Considering SOC under Large-scale Wind Power Penetration	Yu Kurita
1409	A Generator Output Adjustment Method considering Transient Stability ATC and Multi-swing Stability	Kaoru Nakamura
1410	A New Approximation Method for Generating Day-Ahead Load Scenarios	Yonghan Feng
1411	Semi-Definite Programming based Control for WECS over Full Operating Regions	Can Huang
1412	Voltage Quality Improvement in Distribution Networks Containing DERs using UPQC	Sumit Mazumder
1413	A Two-Level Online Parameter Identification Approach	Runze Chen
1414	Power System Online Security Operational Trend Analysis and Simulation Results	Feng Zhao
1415	Preliminary Modeling and Stability Analysis of Physically Distributed Power Systems with Constant Delay	Christian Schegan

1416	Stochastic Economic Dispatching for Wind-Penetrated Power Systems	Amir Hossein Shahirinia
1417	Order Recursive and Real-time Estimation of Power System Electromechanical Modes	Gurudatha Pai
1418	Multi-Band Sub-Synchronous Damping Controller (MBSSDC) for Type III DFIG Wind Power Farms	Jason Pannell
1419	Small Signal Stability Analysis of Two Area System with Magnetic Amplifier	Xiaohu Zhang
1420	Modeling Inverter PQ Control in PSCAD	Yin Li
1421	Simplified WECC Model with Wind Penetration	Lu Yidan
1422	Stability Analysis of Unbalanced Synchronous Machine Based Distributed Generators	Ehsan Nasr Azadani
1423	Switching Loss and Cell Capacitor Balancing of Modular Multilevel Converter under Various Modulation Frequencies	Hee Jin Kim
1424	A Real-Time Simulation Model of Community Microgrid	Ling Xu
1425	Improvement of Composite Load Modeling Accuracy Using Parameter Shift Algorithm	Kim Jae-Kyeong
1426	Enhanced Frequency Regulation Service using Hybrid Energy Storage System against Increasing Power-Load Variability	Youngho Cho
1427	Investigation of Power Flow solution When Slack Generator Hits Reactive Power Limit	Hung-Ming Chou
1428	A Fast and Efficient Load Shedding Algorithm to Alleviate Transmission System Overloads and Under Voltages	Yaser Tohidi
1429	Implementing a Nuclear Power Plant Model for Evaluating Load-Following Capability on a Small Grid	Samet Egemen Arda
1430	Improved Cascading Outage Analysis model using Outage Checkers	Yezhou Wang
1431	Methodology to Determine Distribution Level Impact of Dynamic Transfers	David Kleinschmidt
1432	Effect of Price-Responsive Demand on Dispatch and Costs	Felipe Ramos Gaete
1433	Decision Support Concerning Demand Response Programs Design and Use _ A Simulation Tool	Pedro Faria
1434	PMU Testing and Hardware Interface Architecture for Synchrophasor Application Testing	Lee HyoJong
1435	A New Relaying Algorithm for Blocking Third Zone Distance Relays During Stable Power Swings In Power Systems	Dong Kang
1436	Simulation Study of PEM Fuel Cell and its Dynamic Characteristics	Yongli Zhu
1437	Sequence Network Models of Wind Turbine Generators for Short-Circuit Studies	Dustin Howard
1501	Stability Analysis for Power Systems with Price-Based Demand Response	Zhechong Zhao
1502	Developing a Scenario-Based Demand Response for Short-Term Decisions of Electricity Retailers	Nadali Mahmoudi
1503	Ohmic Transmission Loss Minimization in the AC-DC Grids	Mohamadreza Baradar
1504	Multi-level state estimation utilizing synchronized phasor measurements	Lin Zhang
1505	New Non-Recursive Algorithms for Real Time Voltage Stability Monitoring using Synchrophasors	Saugata Biswas
1506	Active Network Management using Distributed Constraint Optimisation	Dimitrios Athanasiadis

1507	Vehicle-to-Grid Service Potential with Price Based PEV Charging/Discharging	Nima Harsamizadeh Tehrani
1508	Design of an Online Intelligent Alarming System for Cascading Failures of Group of Wind Farms	Jianan Mu
1509	Control of the Synchronization and Payback Related to the Provision of Frequency Services by Cold Appliances	Vincenzo Trovato
1510	On Using Synchrophasor Data to Assess Power System Steady-State Stability	Reinhard Karl
1511	A Hybrid Simulation Method for EVs' Operation considering Power Grid and Traffic Information	Shujun Xin
1512	Development of a Three Phase Unbalanced Continuation Power Flow Tool	Leslie Corson
1513	A Simultaneous Perturbation Approach for Solving Economic Dispatch Problems with Emission Storage and Network Constraints	Yu Xia
1514	Distributed Energy Management under Smart Grid Plug-and-Play Operations	Yuan Zhang
1515	Heuristic Approach to Resource Allocation in the Emerging Smart Grid	Timothy Hansen
1516	Voltage Assessment in Smart Grids Involving Distributed Generation	Ahmed Mohamed
1517	PHEV Home-Charging Model Based on Residential Activity Patterns	Pia Grahn
1518	Power Sharing Control with Frequency Droop in a Hybrid Microgrid	Megha Goyal
1519	Look-Ahead Energy Management of a Grid-Connected Residential PV System under Critical Peak Pricing Programs	Jaeyeong Yoo
1520	Demand Response as a Tool for Coordinated Charging of PHEV Parking Garages	Venkata Satish Kasani
1601	Distributed Data Fusion for State Estimation in Cyber Physical Energy Systems	Abhinav Kumar Singh
1602	CONTROL STRATEGIES OF MICRO SOURCES IN MICROGRID	Xin Wang
1603	A Robust Multi-Objective Controller of VSC-Based DC-Voltage Power Port in Hybrid AC/DC Microgrids	Masoud Davari
1604	Hardware Design of Smart Home Energy Management System with Dynamic Price Response	Qinran Hu
1605	Smart Meter Deployment and Applications in the United States	Megan Milam
1701	Distribution Locational Marginal Pricing for Optimal Electric Vehicle Charging Management	Ruoyang Li
1702	A Comparative Analysis of Volt-Var Control Algorithms for the Distribution System	Griet Devriese
1703	Maximizing the Penetration of Plug-In Electric Vehicles in Distribution Network	Junhui Zhao
1704	An Investigation of the Effectiveness of a Network Reconfiguration Experiment at Drexel University	Nicole Segal
1705	Standardization of Power System Protection Settings Using IEC 61850 for Improved Interoperability	Qiteng Hong
1706	PDC Testing and Characterization of Synchrophasor Based Applications	Jeong Hun Kim
1801	Action Research for Power System Engineering Education	Mostafa Farrokhbadi
